

Dear reader,

The underlying document could easily be the dullest product information you will ever read. We do not need a shiny brochure with flashy photos and screaming headers. A plain piece of white paper with some lines of text is enough.

However, this product information sheet is also unique. It is printed with the Ecofont Sans typeface.

Ecofont Sans reduces printing costs and helps saving the environment by little holes in its letters. The ink / toner savings are approximately 28%! Ecofont Sans can be used in any application you want. For example SAP, CRM systems, etc.

Ecofont Sans is for use in print, not screen. So please print this page and be amazed by how our brains ignore the holes in the letters while reading.

Our first advice to our customers is not to print at all. And only if you really need to print, then print with Ecofont. As you have most possibly printed this page, make it a very useful print and make sure your company will become a customer of Ecofont.

If you would like additional information, please contact us at www.ecofont.com.
